

# Church Street (US 29) Bridge Rehabilitation

The South Carolina Department of Transportation (SCDOT) is undertaking the rehabilitation of the Church Street Bridge (US 29). The project is needed to address the deteriorating bridge deck and improve the overall condition of the structure.

The proposed project will include repairing the bridge deck, concrete piers, and the bridge drainage system and will include improved aesthetics and pedestrian safety features. This project is being funded through SCDOT Bridge Maintenance Funds.

During construction, the bridge will remain open to vehicular traffic, but will be limited to one lane in each direction. Lane closures may cause delays during peak travel times and commuters and area business owners should plan accordingly. Pedestrian facilities on or under the bridge will be closed at times during construction.
